

## CCTV IP Extender (500110)

### Frequently Asked Questions (FAQ)

1. **Is it possible to connect four (4) 500110 over one Cat5e/6 cable. i.e. one extender per twisted pair?** Yes. However, due to crosstalk, maximum distance may be less. MuxLab has not yet determined what the maximum distance is in this configuration.
2. **Does the 500110 work with all IP cameras?** Yes.
3. **Can you connect an Ethernet switch in front of the 500110 to connect more cameras?** Yes. However, there is also a bandwidth issue. The more IP cameras that are connect via the same IP link, the greater the image degradation.
