MuxLab Eases CCTV Video/Power Cabling

Power Cable Assembly Connects Hub to Rackmount PSU

Montreal, Canada — MuxLab Inc (www.muxlab.com), designer and manufacturer of CCTV and audio-video connectivity solutions, announces one of its latest product for the security video industry…..**The Passive CCTV Hub Plus (500134)**.

In response to the growing need to streamline DVR-based security video cabling, the Passive CCTV Hub centralizes the management of video, remote power and PTZ control over Category 5 twisted pair cable in medium and large CCTV installations.   The Passive CCTV Hub Plus allows each camera connection to support either video only, video and remote power or video, remote power and control via one Cat5 cable for more efficient cabling.   The Passive CCTV Hub Plus is 1U 19" rack-mountable and includes a detachable 16-channel power cable assembly that allows remote power to be quickly connected to the hub from a 16-channel rackmount CCTV power supply.

The product supports up to sixteen (16) cameras. Each camera port may be individually configured to transmit any combination of video, remote power and control over a single Cat5 cable for maximum cabling versatility.   The product complies with EIA568 wiring standards and works in conjunction with the CCTV Pass-Thru Balun (500022) and Power-Thru Balun (500024) as well as other MuxLab CCTV products for a total centralized CCTV cabling solution.
