HDMI 2.0 Digital Signage Media Player
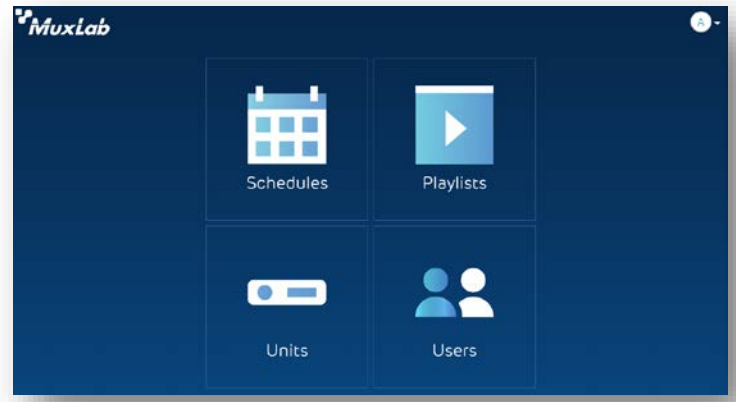

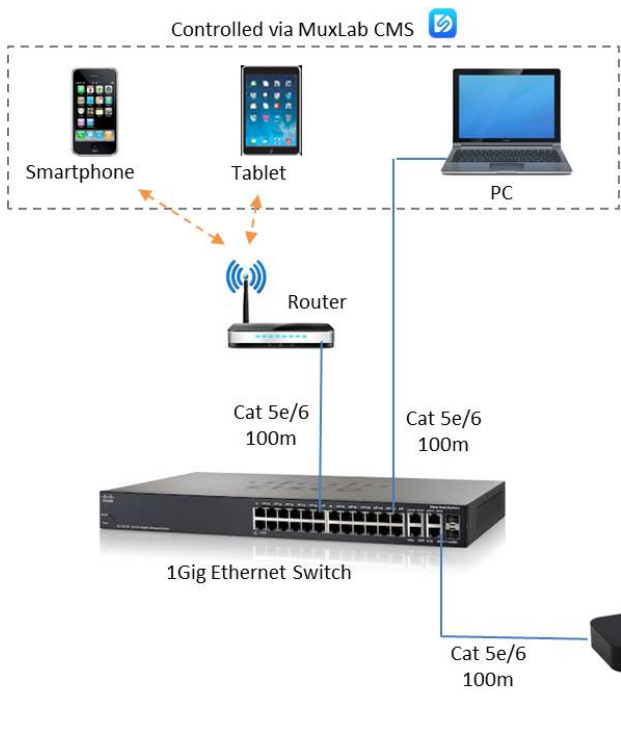

with Intuitive CMS Platform

NEW! CONTROL MANAGEMENT SOFTWARE!

MuxLab's CMS (Content Management System) software has been designed to be extremely intuitive, allowing the user to easily gather, organize and schedule audio, video and image content to be sent from the MuxLab Digital Signage Media Player (500769) to any number of displays and video walls. This system works in conjunction with MuxLab's AV over IP product family to distribute content in a versatile manner for an entire end to end solution. Content may be schedule for the entire week operating autonomously, with additional weeks ready to automatically come into play when needed. It offers the user "set and forget" functionality. The software uses the latest in technology to offer a simple graphical interface that makes the user experience in planning and implementing Digital Signage a breeze. Create multi-view window layouts and assign audio, video and image content to each, add text banners and image logos, schedule all content in minutes and let the system manage the rest. Digital Signage has never been easier. And unlike other Signage systems, MuxLab offers a complete solution in conjunction with its extensive AV over IP product family for signal distribution. The Media Player can play content from multiple sources at the same time, including from its internal memory, from a USB memory stick, and streamed content from a local Ethernet network as well as over the Internet.
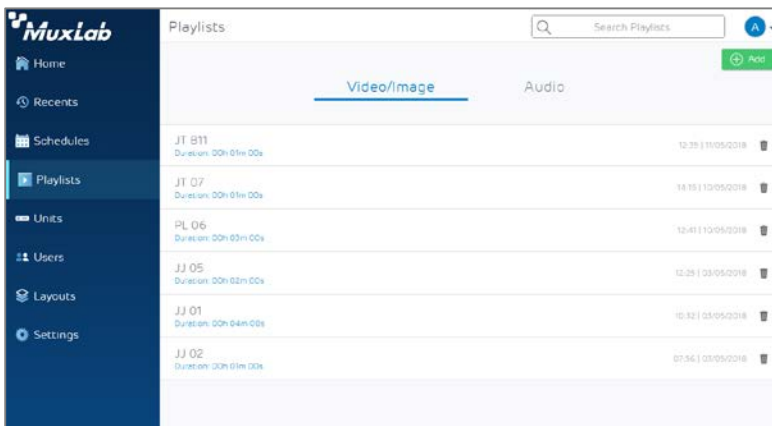

model 500769

Applications:

➢ Digital signage / Media player

➢ AV streaming over LAN, Wi-Fi and Internet

➢ Commercial and residential AV systems

➢ Corporate lobbies, malls and boutiques, airports, subway/train/bus stations, etc.
