FOR IMMIDIATE RELEASE

MuxLab to Showcase New Pro AV Products and Upgrades to its AVoIP Line at InfoComm 2023

Visit stand 1215 to see the AVoIP Eco-System partnered with Q-SYS and NETGEAR live in action.

INFOCOMM 2023, ORLANDO, JUNE 14 2023 – MuxLab Inc., designer and manufacturer of signal distribution solutions across various markets including Pro AV, Broadcast, Video Conferencing, and Digital Signage, is excited to showcase new products and its newly updated AVoIP line at InfoComm 2023.

The wide-ranging AVoIP line, which consists of over 30 products across various technologies, has recently received an overhaul. The flagship line now offers 6 new categories to better serve the vast arrays of technologies and latencies and allows customers to better navigate the products and ensure they are offering the best solution.

MuxLab's partnership with Q-SYS also allows the AVoIP line to be a completely integrated solution, paired with their preferred network switches as a proud reseller of the NETGEAR GSM4212P and GSM4230P switches. The Q-SYS management system works seamlessly with the MuxLab Pro Digital Controller (model 500812) to control and manage AVoIP systems of all sizes. The NETGEAR professional AV switches are now the recommended choice for all MuxLab AV over IP installations worldwide. At InfoComm booth 1215, MuxLab will demo a complete eco-system solution to the Pro AV market demonstrating a complete start to finish AVoIP installation.

MuxLab will also be demoing its new complete Dante audio solution consisting of various new products including encoders and decoders, amplifiers, interfaces, and digital signal processing devices, and will also be releasing its new touch control panel paired with a brand-new user-friendly interface (model 500817).

Daniel Assaraf, CEO of MuxLab says, "We are excited to be coming to InfoComm this year with new products and product lines, along with our newer partnerships to offer complete solutions to the Pro AV market. We are proud of the continuous expansion of our product lines and look forward to showcasing our new technologies live at InfoComm."

Visit MuxLab at stand # 1215 at InfoComm in Orlando for more information and to see our live interactive demos.
