Company gets total revamp with MuxLab

Global company based in Mexico City gets total revamp with MuxLab.

A Mexico City based company, a global logistics company with branches in various countries, has gotten a complete overhaul in its many rooms thanks to a successful install by integrator Creatio Entornos. The revamp consisted of 27 spaces among them 12 meeting rooms, a coffee bar, a reception space, a showroom, a laboratory, 3 VIP offices, 4 huddle rooms, one training room and 3 large conference rooms.
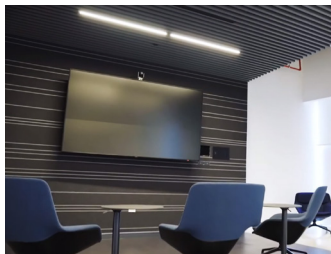

The company, looking for the best connectivity and collaboration technolog y with top audio-visual quality, chose to use MuxLab's AV over IP technology thanks to its user-friendliness, top quality, and fair price points. Rooms received top of the line connectivity for smooth switching and routing of multiple AV signals. The MuxLab HDMI 4K over IP PoE Transmitter and Receiver (models 500759 - TX and 500759 - RX) were

used for the deployment and offered a seamless install process. Paired with the MuxLab Pro Digital Network Controller (model 500812) for system control and upgrades, the new install functions flawlessly and gives the end user full control of their AV system.

The set up interacts using a QSC control system which allows the control of AV and lighting in an easy to use, intuitive way. Omnitracs is very satisfied with the solution and the technology used daily offers the quality and ease of use they were looking for.

> **❙❙** *We chose the technology and brands within the project because they turned out to be the ones that best complemented what the client was looking for, as well as great support from MuxLab throughout the project design and installation* **❙❙**
